

Functions tolower & toupper

- Function **tolower** converts an uppercase letter to a lowercase letter and returns the lowercase letter.
- If the argument is not an uppercase letter, tolower returns the argument unchanged.
- Function **toupper** converts a lowercase letter to an uppercase letter and returns the uppercase letter.
- If the argument is not a lowercase letter, toupper returns the argument unchanged.

Problem:

A program that finds that the letter received from the user is an upper or lower case letter using the **tolower** and **toupper** functions.
